[EX], [EK], [EF], [XA]

## SH-8065(K)

[EX], [EK], [EF], [XA]

## Areas

- \* [EX] is available in Switzerland and Scandinavia.
- \* [EK] is available in United Kingdom.
- \* [EF] is available in France.
- \* [XA] is available in Southeast Asia, Oceania, Africa, Middle Near East and Central South America.

- \* The cabinet, front panel and knob are available in black color and silver types.
- \* The black type model is provided with (K) in the Service Manual.

## Specifications

Specifications are subject to change without notice for further improvement.  
Weights and dimensions shown are approximate.

## (DIN 45 500)

<b>Frequency response (center position):</b>	5 Hz~100 kHz, -1 dB
<b>Maximum output voltage:</b>	8 V (1 kHz, THD 0.01%)
<b>Rated output voltage:</b>	1 V
<b>Rated total harmonic distortion:</b>	0.0025% (20 Hz~20 kHz)
<b>Input sensitivity:</b>	1 V
<b>Signal-to-noise ratio:</b>	100 dB (110 dB, IHF' A)
<b>Maximum input voltage:</b>	8 V (1 kHz)
<b>Input impedance:</b>	47 kΩ
<b>Output impedance:</b>	600Ω
<b>Gain:</b>	0±1 dB
<b>Band level controls:</b>	+12 dB~-12 dB, +3 dB~-3 dB (33 elements continuously variable per channel)
<b>Signal level selector:</b>	150 mV/1 V

## ■ LOCATION OF CONTROLS

### • Switches

#### Equalization switch (EQ)

This switch can be used to turn the equalization circuitry on and off.

**on:** Set to this position for equalizer correction.

**off:** Set to this position to turn off equalizer correction. By turning this switch on and off, the equalizer effect can also be checked. When this switch is in the "off" position, signals will still pass through the unit and be emitted, regardless of whether the power switch is in the "on" or "off" position.

**Tape-monitor selector (tape monitor)**

**source:** Set to this position to listen to the radio or a disc.

**tape:** Set to this position to listen to a tape deck.

**Note:**

If the equalization-position selector is set to the "source" position and the equalization switch is set to the "on" position, the frequency response of the radio, disc and tape deck can be controlled.

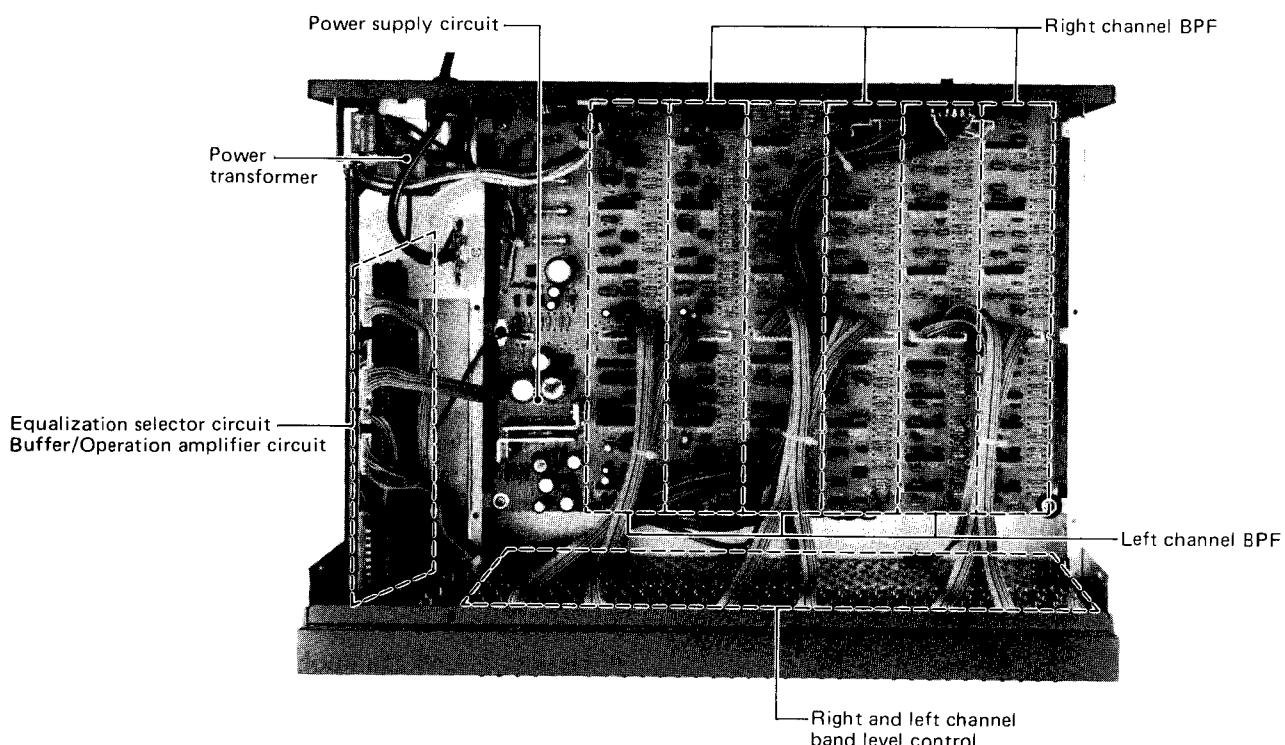

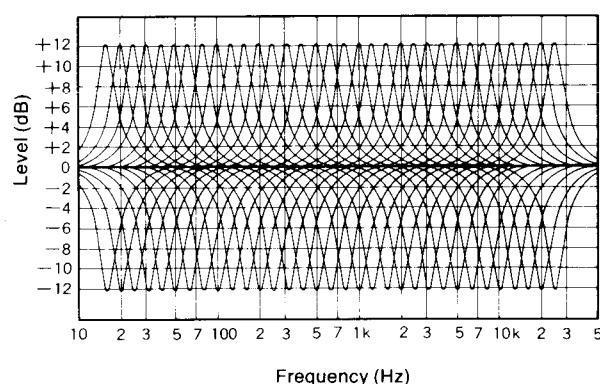

**Equalization-position selector (EQ position)**

**source:** Set to this position to record without equalizer correction.

**rec out:** Set to this position in order to make a tape recording of a radio broadcast or a disc while controlling the frequency response. Also, compensated playback sound can be heard at this position.

**Note:**

The equalization switch must be set to the "on" position, otherwise the frequency response cannot be controlled.

**■ TOTAL FREQUENCY RESPONSE****Frequency response ( $\pm 12$  dB position)**

## ■ DISASSEMBLY INSTRUCTIONS

### ● How to remove the front panel

1. Remove setscrews ① ~ ⑨ in Fig. 1 to remove the cabinet.
2. Remove 5 setscrews of the front panel (Fig. 1).
3. Pull out the connectors J3 and J4 from the switch printed circuit board on the left side.
4. Remove the front panel with care not to damage the knob.

### ● How to remove the bottom board

1. Remove 9 setscrews as in Fig. 2 and remove the bottom board.

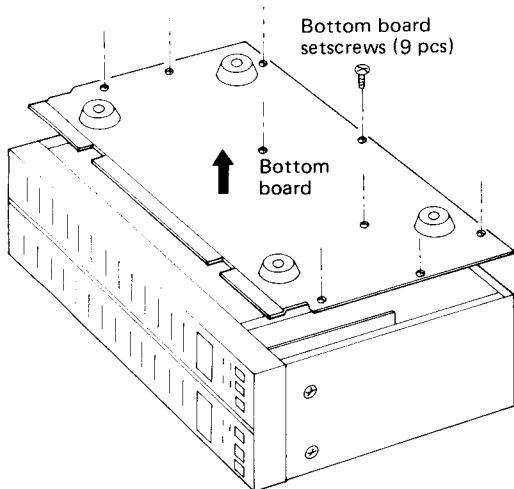

Fig. 2

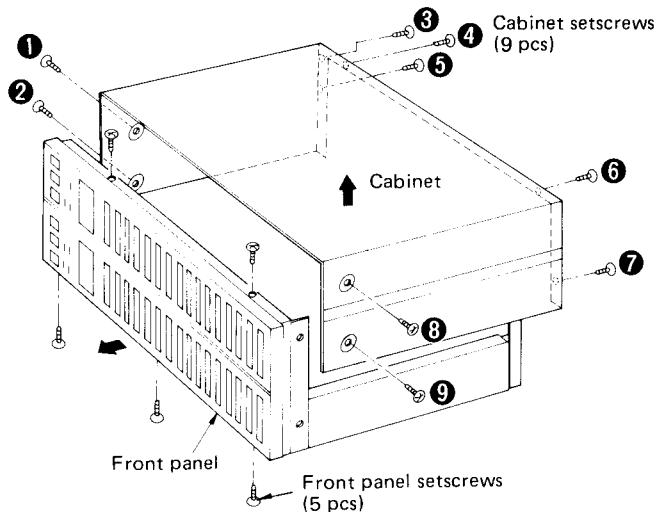

Fig. 1

### ● How to remove the slide volume

1. Remove the cabinet and front panel.
2. Pull out the 33 knobs of the right and left channels, totalling 66 knobs.
3. Remove the 2 setscrews of the ornament panel as in Fig. 3.
4. Press the claws at the top of the ornament panel (A and B) illustrated in order to remove the ornament panel. (Remove the remaining two ornament panels in the same way.)
5. Remove 18 slide volume setscrews to catch the slide volume from the chassis together with the printed circuit board.

### ● How to attach the knobs

Insert the top (left channel) volume lever into the lower hole of the knob, and the bottom (right channel) lever into the upper hole, as shown in Fig. 4.

## ■ REPLACEMENT PARTS LIST

### • Resistors and Capacitors

- Notes:**
- Part numbers are indicated on most mechanical parts. Please this part number for parts orders.
  - Important safety notice:  
Components identified by **△** mark have special characteristics important for safety.  
When replacing any of these components use only manufacturer's specified parts.
  - The "S" mark is service standard parts and may differ from production parts.

1. Part numbers are indicated on most mechanical parts. Please this part number for parts orders.
  2. Important safety notice:  
Components identified by △ mark have special characteristics important for safety.  
When replacing any of these components use only manufacturer's specified parts.
  3. The "S" mark is service standard parts and may differ from production parts.

## ■ SCHEMATIC DIAGRAM A

(This schematic diagram may be modified at any time with the development of new technology.)

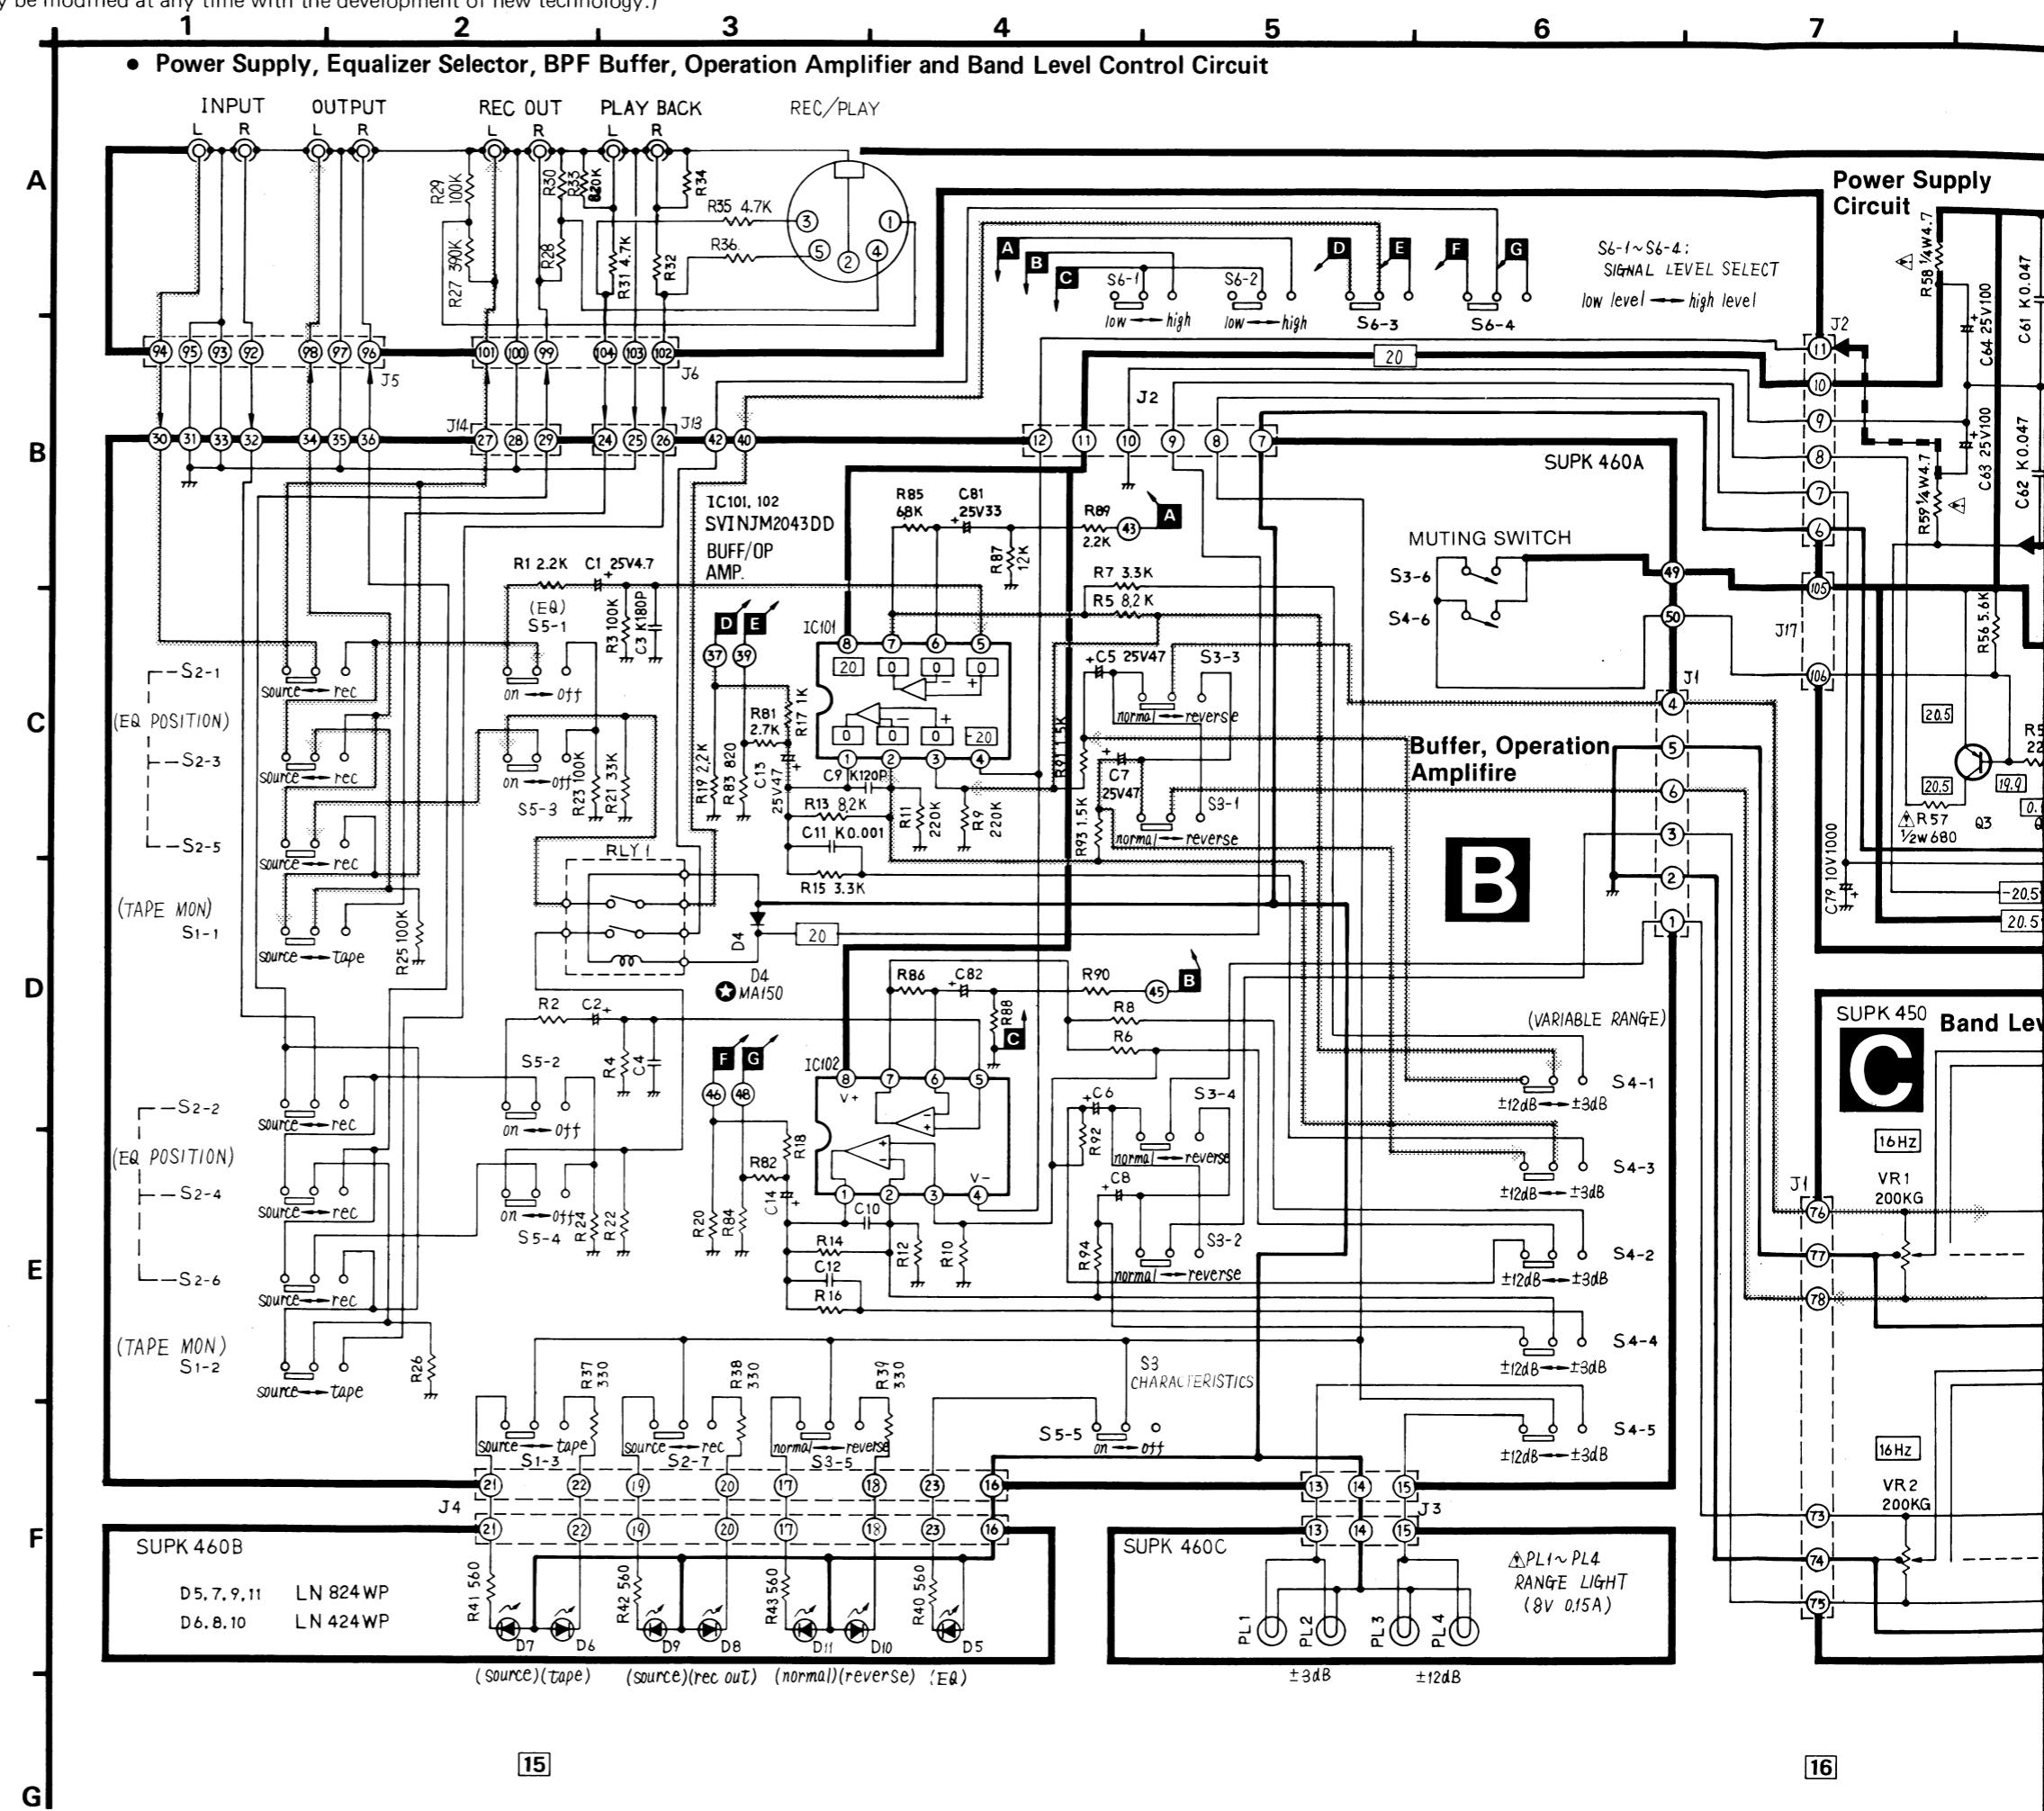

## Notes:

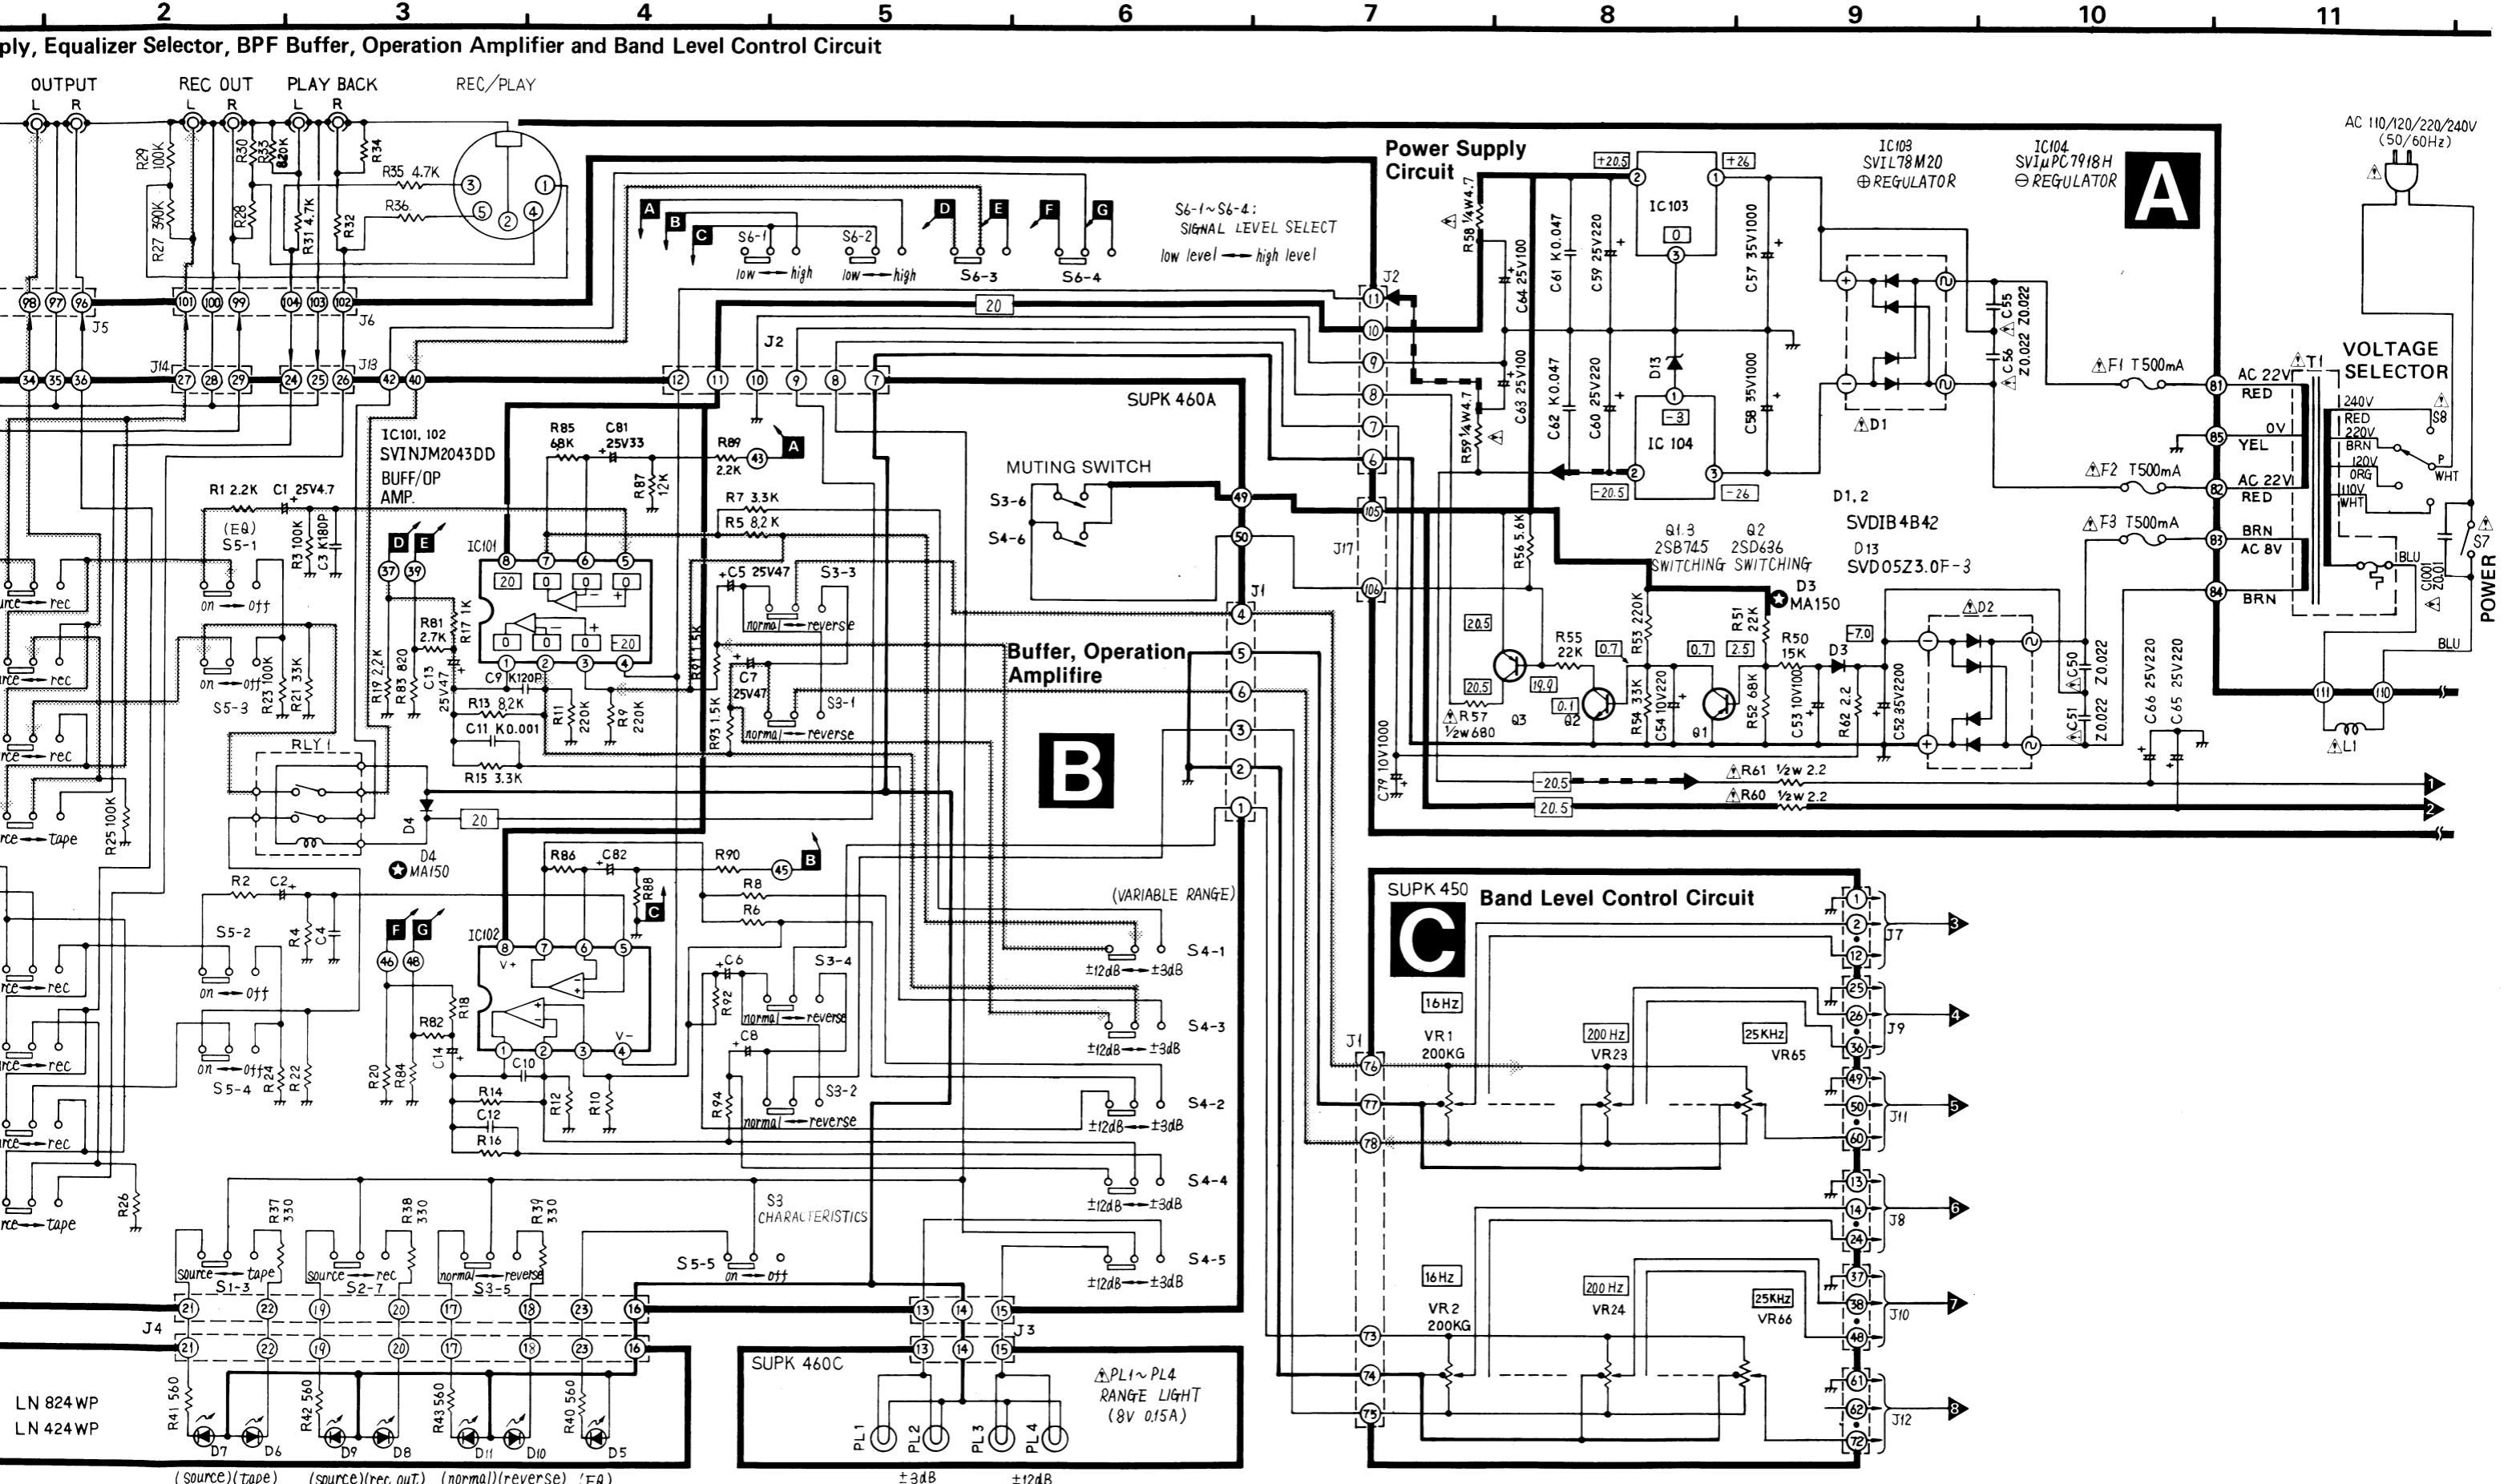

\* The part No. of transistors, IC and diodes mentioned in schematic diagram stand for production Part No.

Regarding the Part No. without mark, the production Part No. are different from the replacement part No.

Therefore, when placing an order for replacement parts, please use the Part No. in the replacement parts list.

1. **S1-1 ~ S1-3** : Tape monitor switch in "source" position.  
source → tape
2. **S2-1 ~ S2-7** : Equalization - position selector switch in "source" position.  
source → rec out
3. **S3-1 ~ S3-6** : Characteristics selector switch in "normal" position.  
normal → reverse
4. **S4-1 ~ S4-6** : Variable range selector switch in "± 12 dB" position.  
± 12 dB → ± 3 dB
5. **S5-1 ~ S5-5** : Equalization switch in "on" position.
6. **S6-1 ~ S6-4** : Signal level selector switch in "low level" position.  
low level (150mV) → high level (1V)
7. **S7** : Power switch in "on" position.
8. **S8** : Voltage selector switch in "220V" position  
110V → 120V → 220V → 240V
9. S3-6 and S4-6 are muting switches for changeover.  
These switches momentarily turns on the relay off.
10. The circuit is same for both L and R channels.  
For the resistance value and Capacity of R channel Op amp. (IC102), refer to the L channel (IC101).
11. Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard. Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.
12. Signal lines of left channel.
13. Positive (+ B) voltage lines. Negative (- B) voltage lines
14. Important safety notice:  
Components identified by mark have special characteristics important for safety.  
When replacing any of these components, use only manufacturer's specified parts.

## Notes:

1. Part numbers are indicated on most mechanical parts. Please use this part number for parts orders.
2. Important safety notice:  
Components identified by  $\Delta$  make have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.
3. Bracketed indications Ref. No. columns specify the area.  
Parts without these indications can be used for all areas.
4. The "S" mark is service standard parts and may differ from production parts.
5.  $\blacksquare$ -marked parts are used for black type only, while  $\circ$ -marked parts are for silver type only.
6. Parts other than  $\blacksquare$  and  $\circ$ -marked are used for both black and silver types.
7. The parenthesized numbers in the columns of description stand for the quantity per set.
