E Model

'Dolby' and the double-D symbol are the trade marks of Dolby Laboratories. Noise reduction system manufactured under license from Dolby Laboratories.

STEREO CASSETTE DECK

SPECIFICATIONS

Power Requirements: 220 V ac ~ , 50/60 Hz (AEP model)
240 V ac ~ , 50/60 Hz (UK model)
120 V ac ~ , 60 Hz (US, Canadian model)
110, 120, 220 or 240 V ac ~ , 50/60 Hz (E model)

Recording System: 4-track 2-channel stereo

Power Consumption: 26 W (AEP, UK model)
24 W (US, Canadian, E model)

Fast-forward and Rewind Time: Approx. 70 sec. (with C-60)

Dimensions: Approx. 430 (w) x 130 (h) x 290 (d) mm
17 (w) x 5 $\frac{1}{8}$ (h) x 11 $\frac{1}{2}$ (d) inches
(AEP, US, UK, E model)
Approx. 460 (w) x 130 (h) x 290 (d) mm
18 $\frac{1}{8}$ (w) x 5 $\frac{1}{8}$ (h) x 11 $\frac{1}{2}$ (d) inches
(Canadian model)
including projecting parts and controls

Weight: Approx. 5.7 kg, 12 lb 8 oz (AEP, US, UK, E model)
Approx. 6.4 kg, 13 lb 14 oz (Canadian model)

SAFETY-RELATED COMPONENT WARNING!

COMPONENTS IDENTIFIED BY SHADING AND MARK Δ ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT
À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFIÉS PAR UN TRAMÉ ET UNE MARQUE Δ SUR LES DIAGRAMMES SCHÉMATIQUES, LES VUES EXPLOSIÉES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DES SUPPLÉMENTS PUBLIÉS PAR SONY.

Tape Transport Mechanism Type		TCM-100V3
	Specification	Test Equipment
Forward Torque	28–43 g · cm (0.39–0.59 oz · inch)	Sony torque meter CQ102

**SERVICING NOTE**

When the top cover is removed the internal photo transistor may pick up stray light and shut the set off.

Handling Precautions for MOS ICs (IC801 and IC802)

Generally, the insulation resistance of the oxide layer in MOS IC structures is very high, and the oxide layer is very thin. Because of this, it is possible that the static voltages usually present on clothes and the human body will be enough to generate a potential difference across the insulator, high enough to cause a breakdown of the insulating layer.

The following precautions should be taken while handling these ICs.

(Particular care should be taken under conditions of low humidity.)

Precautions in Replacing MOS ICs

1. Store new ICs by inserting them into a urethane-polyester cushion (which is somewhat conductive), or wrapping it in aluminum foil, so that all the pins are at the same potential.

(The ICs should be stored in that manner until mounted on the circuit board.)

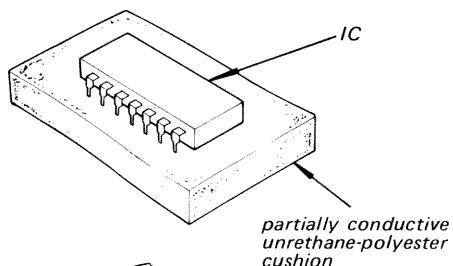

Fig. A

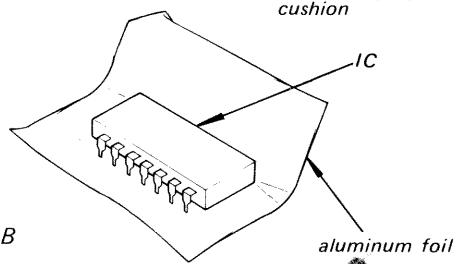

Fig. B

2. Check the soldering iron for possible power-line leakage current. Make sure that there is no leakage path by connecting an ohmmeter to the tip of the soldering iron and the plug as shown in Fig. C. If there is a leakage path, use some other soldering iron.

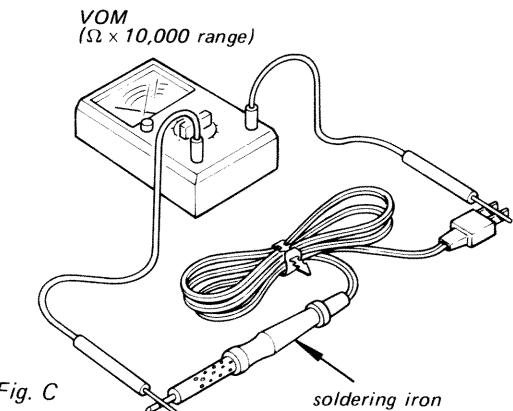

Fig. C

3. Equalize any potential difference between the clothes, the tools in use, the work bench, the set being worked on, and the packaged IC by touching them all in succession with the hands or a conductive wire or tool.
4. The following are effective methods for handling ICs that remove the potential difference across the oxide layer.
 - Use a paper clip modified by soldering in a wire braid insert.

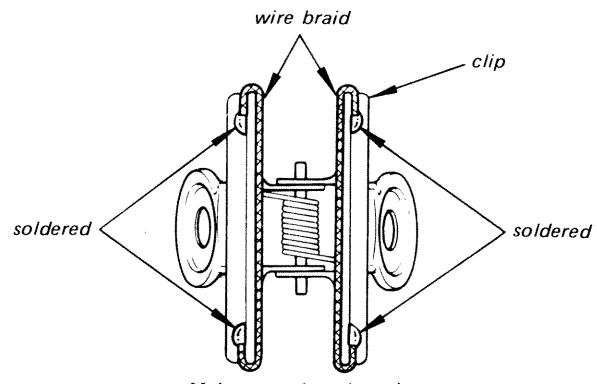

Fig. D

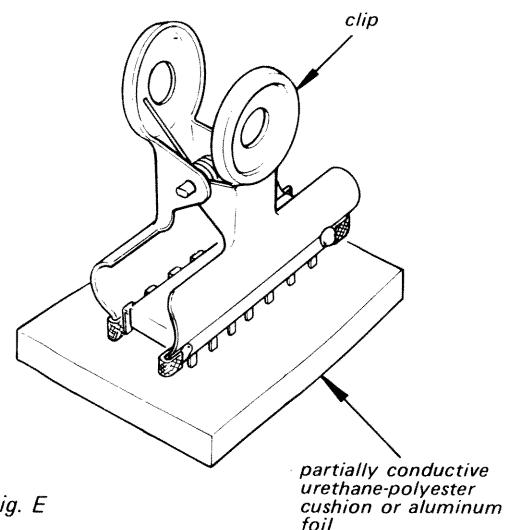

Fig. E

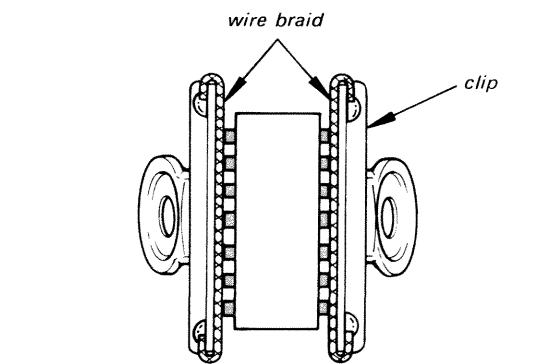

Fig. F

- Take a short length of fine bare wire and wind it around the IC so that it shorts all the pins of the IC, while it is still in the urethane-polyester cushion or aluminum foil. This ensures that all the pins are at the same potential.

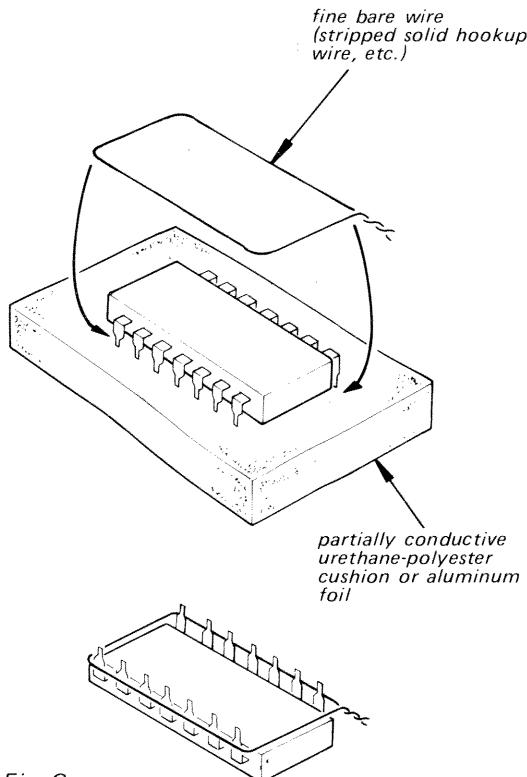

Fig. G

- When it is necessary to handle the IC with the fingers, do not touch any pin, and hold the IC at the ends of its plastic-package case as shown in Fig. H.

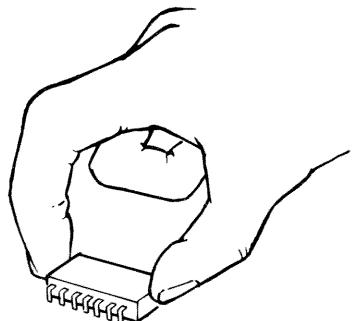

Fig. H

5. Method of Mounting

Insert the IC while holding it with the modified clip, and solder all the pins with the clip still shorting the pins. (Similarly, solder all the pins while the bare shorting wire is still wound around them.). Remove the clip or the bare shorting wire only after all the pins have been soldered.

Precaution while Checking C-MOS ICs

The C-MOS ICs (Complementary MOS) are MOS ICs that have their output sections made up of N-channel and P-channel push-pull stages to increase their speed of operation. If the output terminal of these ICs comes into contact with B+ or B- voltage, then the FET which is ON at that time will either become shorted or open.

This is valid for all the output sections that are connected together by the interconnections. Even the circuits that are physically separated (and not on the same board) can be destroyed simultaneously.

Example:

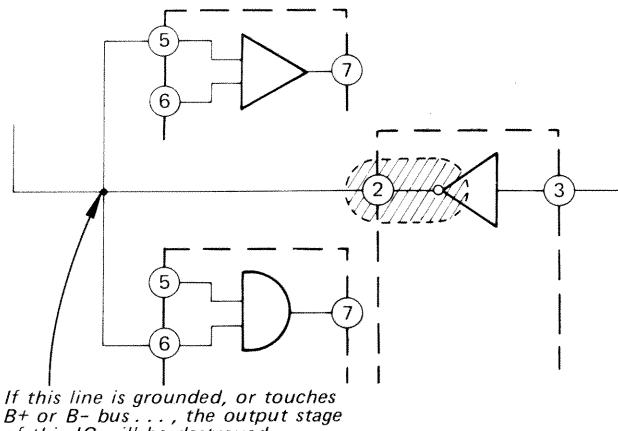

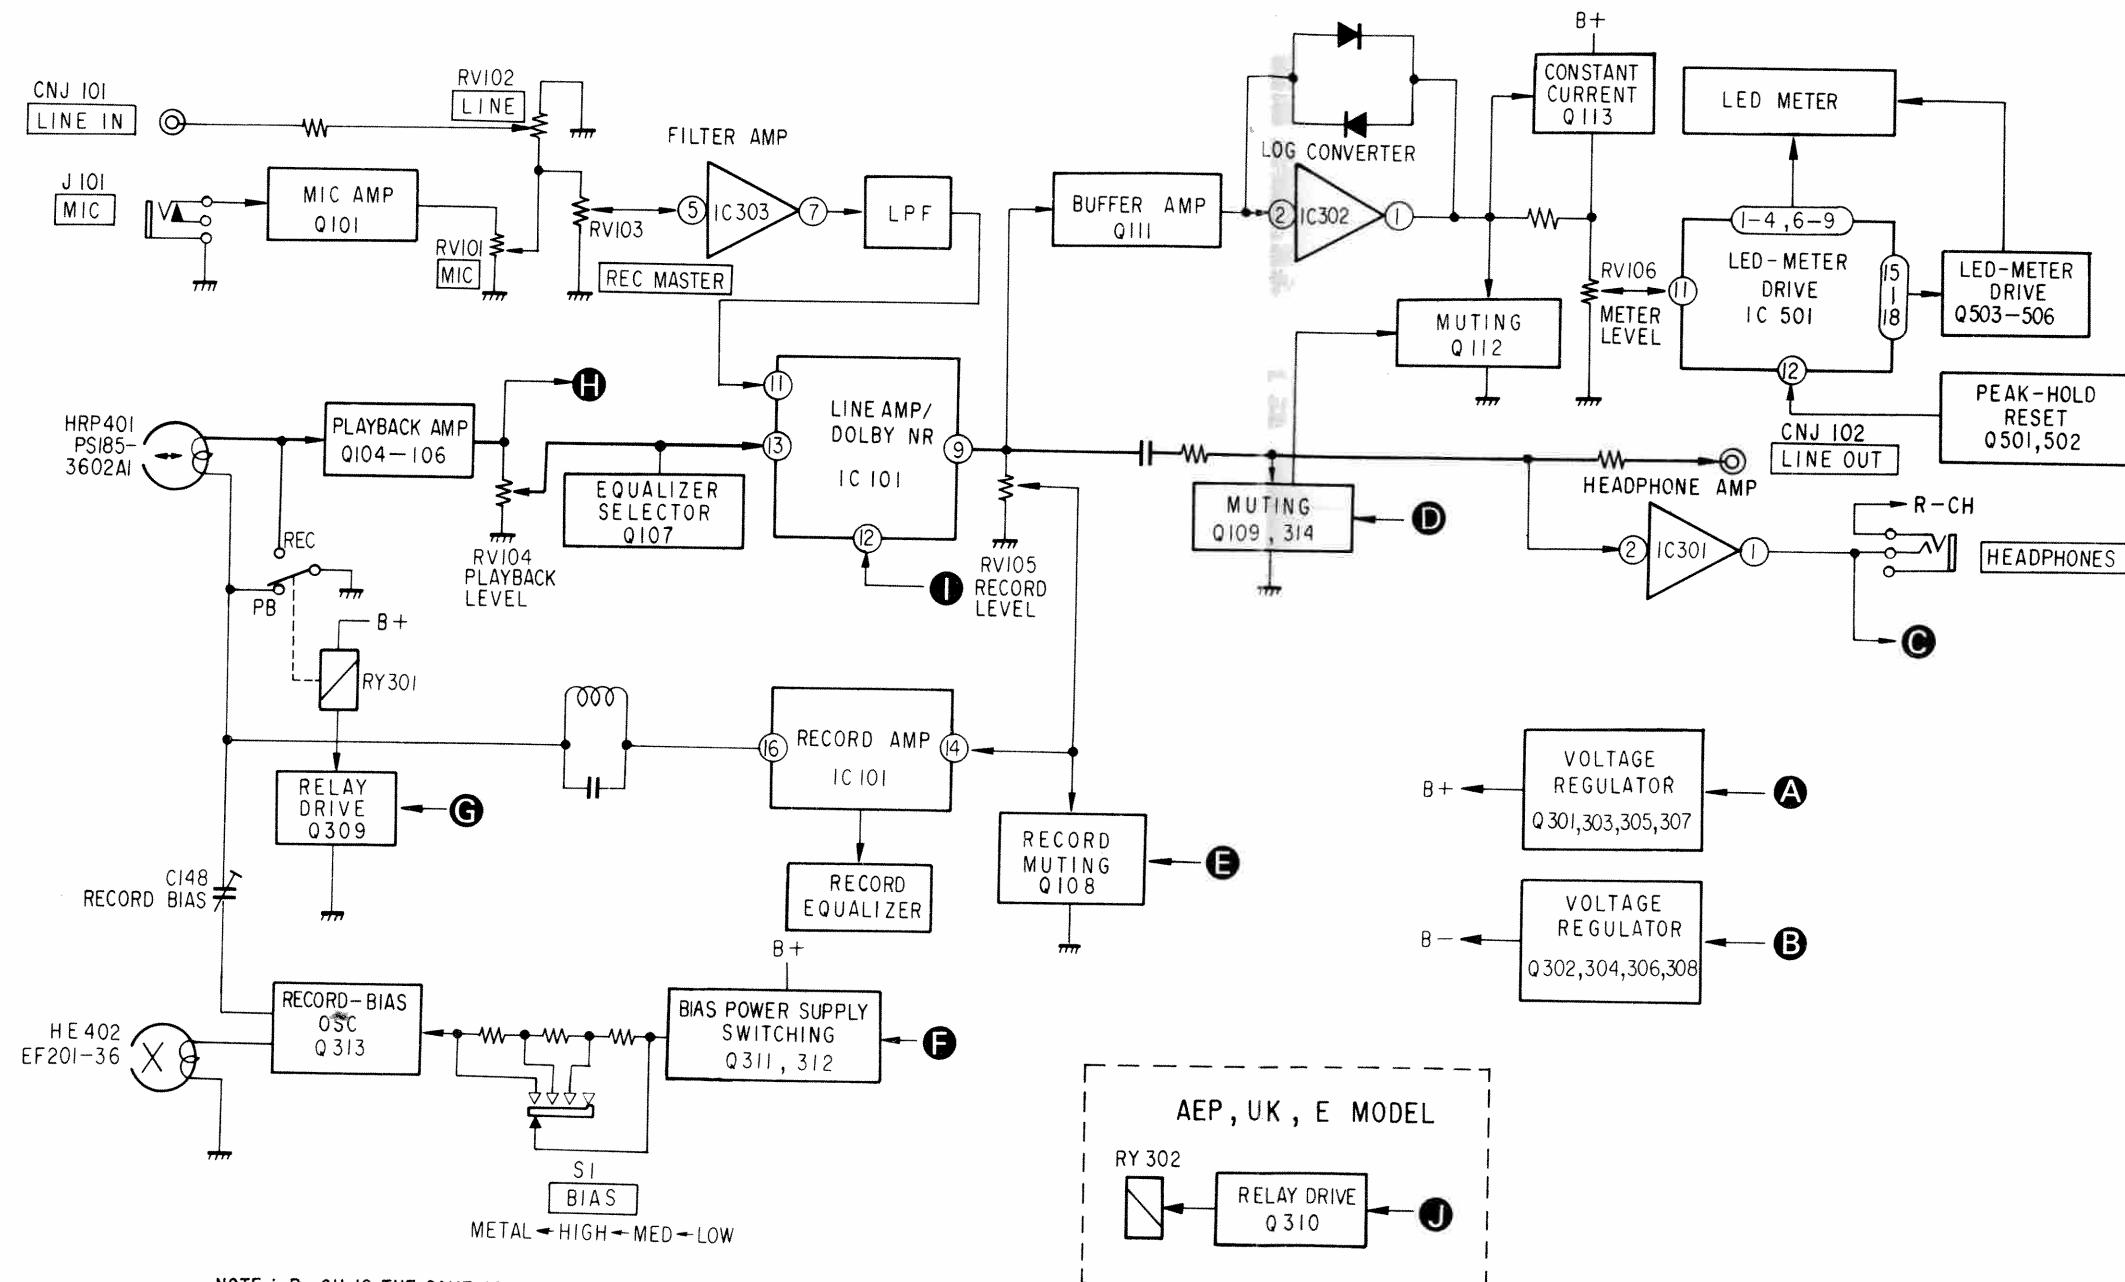

Fig. I

1-2. PROGRAM MEMORY OPERATION

A description of the step-by-step operation of the RMS circuit under an actual music program is given when five musics are recorded in a tape and, the first, third and the fifth musics are played back for an example.

	Operation	RMS Display	Mode		Operation	RMS Display	Mode	
1	POWER switch: ON	[]	stop		13	Terminals 12 and 13 of IC802 become in low level.	[] on and off	Playback and fast forward
2	RMS/MEMORY COUNTER switch: RMS	[]			14	Start of the third music: Terminal 22 of IC802 becomes in high level.		Stop (rewinds a little bit)
3	MEMORY switch: ON The first music in a tape is memorized in the first location of the memory IC.	[] on and off			15	Terminal 25 of IC802 becomes in high level and terminals 24, 26 and 27 become in low level.	[]	Playback
4	PROGRAM switch: pushed twice	[]			16	End of the third music		Stop
5	MEMORY switch: ON The third music in a tape is memorized in the second location of the memory IC.	[] on and off			↓	↓	↓	
6	The fifth music in a tape is memorized in the third location of the memory IC in the same way as steps 4 and 5.				17	End of the fifth music. End of the program operation. Terminal 15 of IC802 becomes in low level.	[]	Shut off
7	Forward button: pushed on. Terminals 13 and 16 of IC802 become in low level.	[]	Playback and rewind					
8	The tape comes in its beginning position.		stop					
9	Terminals 12, 13 and 23 of IC802 become in low level.	[] on and off	Playback and fast forward					
10	Start of the first music: Terminal 22 of IC802 becomes in high level.		Stop. (rewinds a little bit)					
11	Terminal 25 of IC802 becomes in high level and terminals 24, 26 and 27 of IC802 become in low level.	[]	Playback					
12	End of the first music: Terminal 22 of IC802 becomes in low level.		Stop					

TIME CHART OF IC802

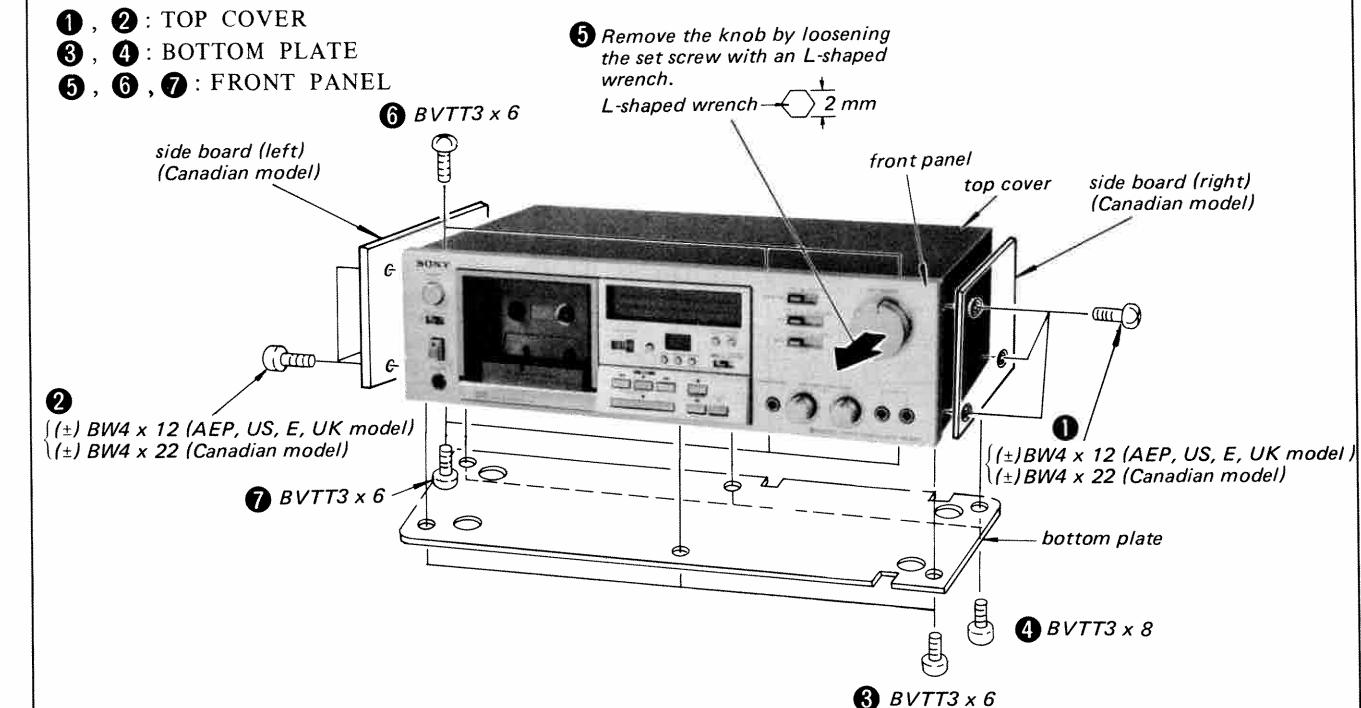

SECTION 2

DISASSEMBLY

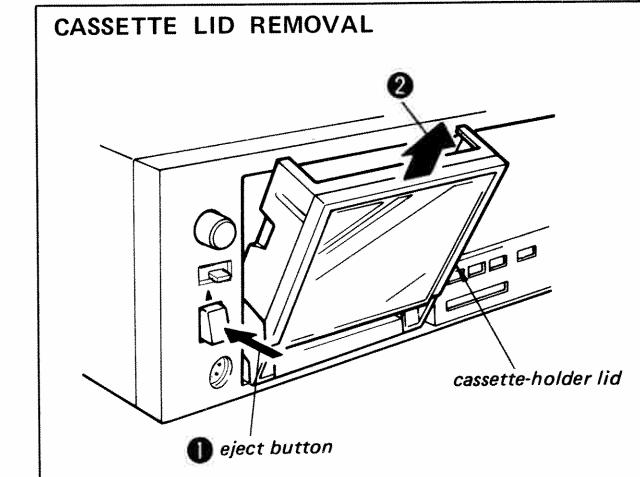

MEMO

- Follow the disassembly procedure in the numerical order given.

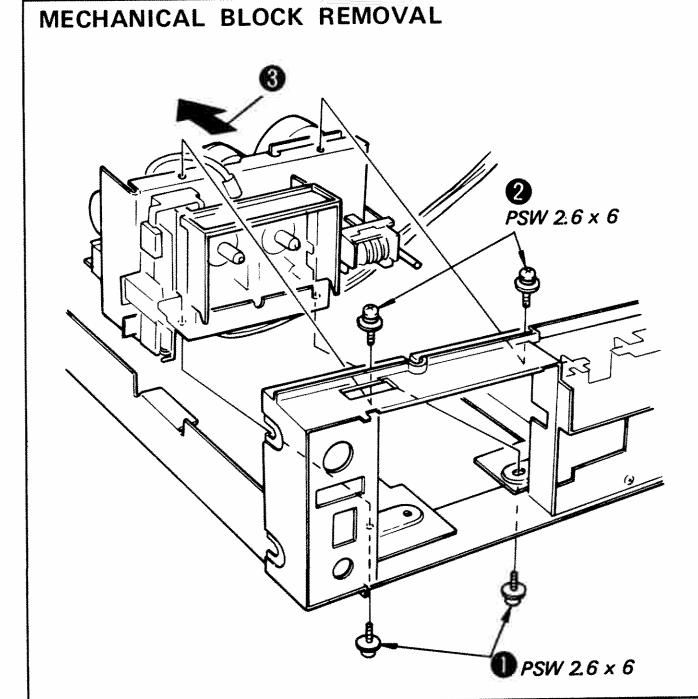

TOP COVER/BOTTOM PLATE/FRONT PANEL REMOVAL

CASSETTE LID REMOVAL

MECHANICAL BLOCK REMOVAL

SECTION 3

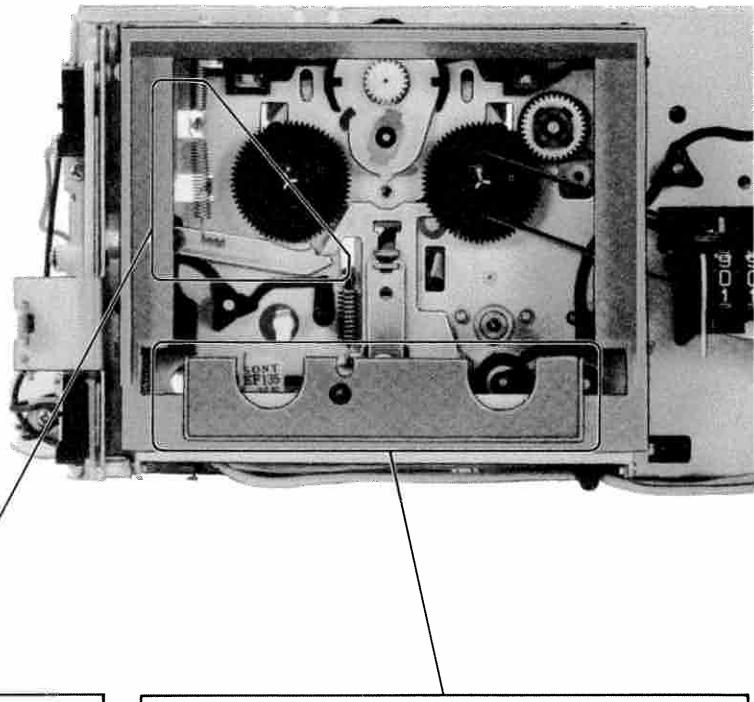

ADJUSTMENTS

3-1. MECHANICAL ADJUSTMENTS

PRECAUTION

1. Clean the following parts with a denatured-alcohol-moistened swab:

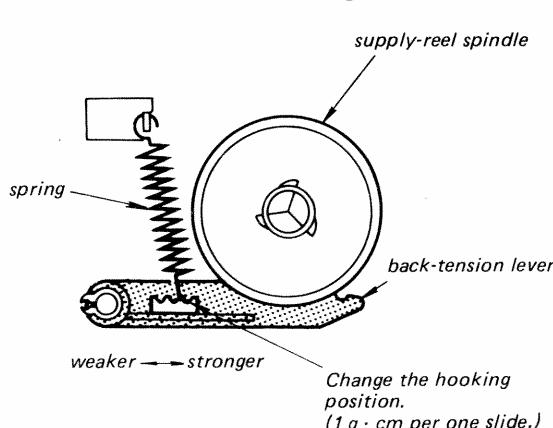

record/playback head	pinch roller
erase head	rubber belts
capstan	idle
2. Demagnetize the record/playback head with a head demagnetizer.
3. Do not use a magnetized screwdriver for the adjustments.
4. After the adjustments, apply suitable locking compound to the parts adjusted.
5. The adjustments should be performed with the rated power supply voltage unless otherwise noted.

Torque Measurement and Back Tension Torque Adjustment

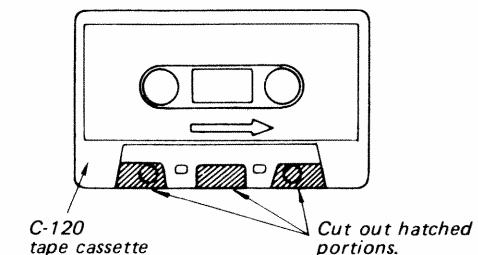

Torque	Torque meter	Meter reading
Forward	CQ-102	28–43 g·cm (0.39–0.59 oz·inch)
Back tension	CQ-102	2.5–4.5 g·cm (0.04–0.06 oz·inch)

2. If the specified back-tension torque is not obtained, change the hooking position.

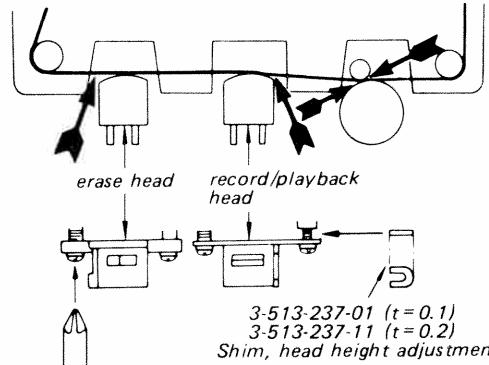

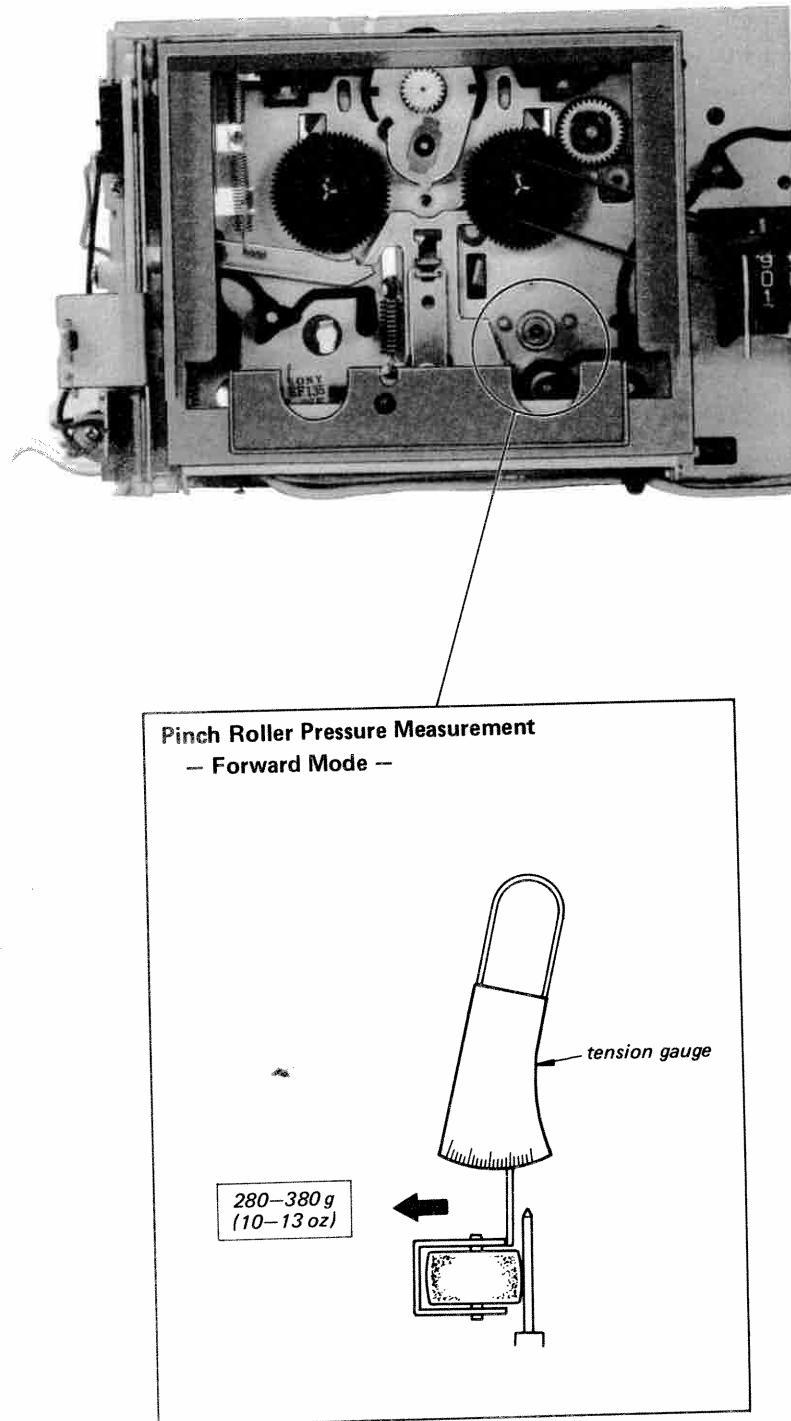

Head Height Adjustment

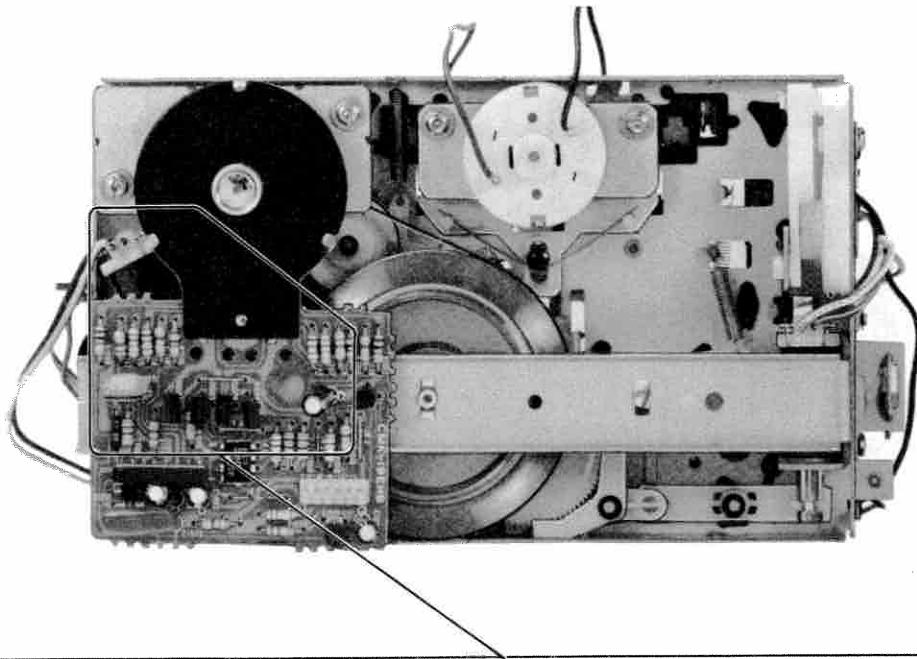

1. Prepare an adjustment cassette as shown below.

2. In playback mode and viewing from the front, adjust the head heights to eliminate tape curl and tape twist at portions of arrows.

Brake Solenoid (PM1) Position Adjustment

— Stop Mode —

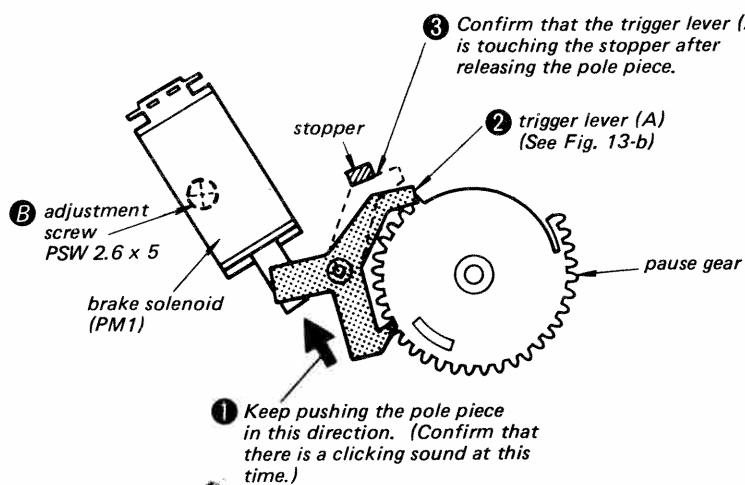

Fig. 13-a

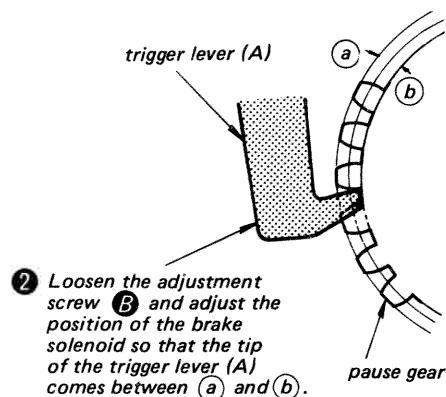

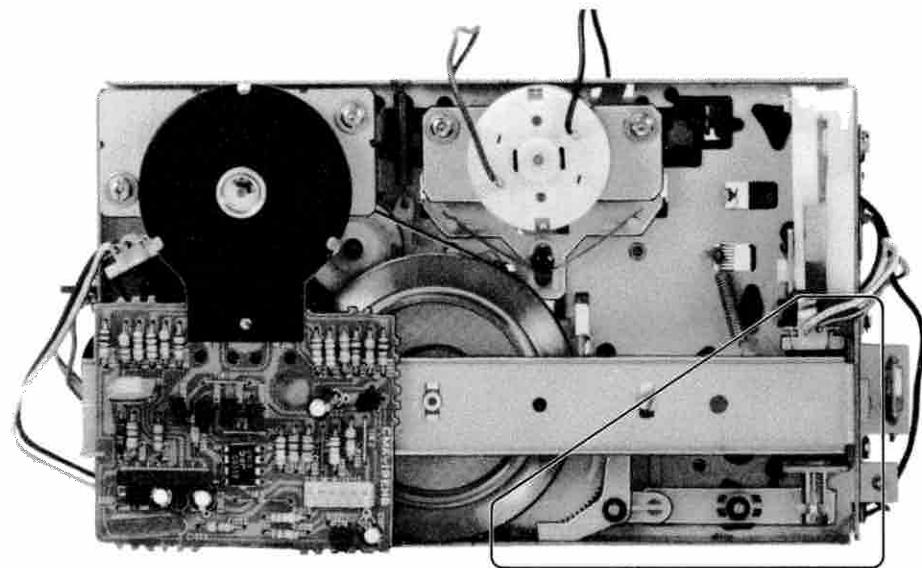

Fig. 13-b

Head Solenoid (PM2) Position Adjustment
— Stop Mode —

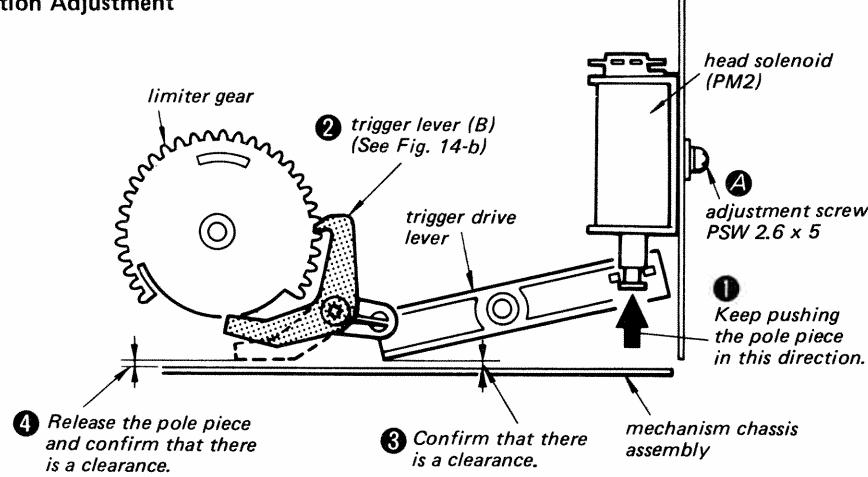

Fig. 14-a

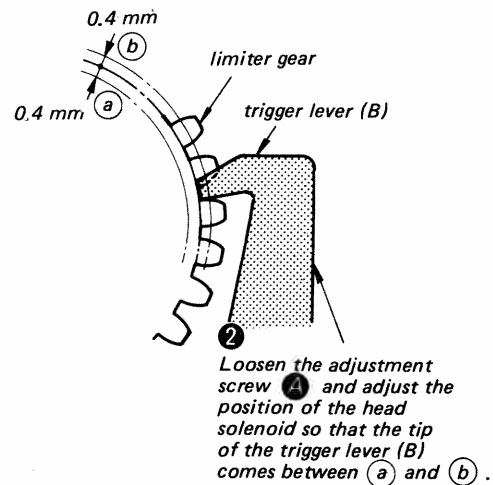

Fig. 14-b

3-2. ELECTRICAL ADJUSTMENTS

Note: The adjustment should be performed in the order given in this service manual. The adjustments should be performed for both L-CH and R-CH.

- Set the BIAS and EQ switches according to the tape as follows.

Tape	BIAS switch	EQ switch
CS-10	MED	TYPE I
CS-25	HIGH	TYPE II
CS-30	MED	TYPE III
CS-40	METAL	TYPE IV

- Switches and controls should be set as follows unless otherwise specified.

DOLBY NR switch:	OFF
EQ switch:	TYPE I
BIAS switch:	MED
REC MUTE switch:	OFF

- Standard Record:

Deliver the standard input signal level to the input jack and set the REC LEVEL control to obtain the standard output signal level.

Standard Input Level

	MIC	LINE IN	REC/PB (AEP, UK, E model)
source impedance	300 Ω	10 kΩ	100 kΩ
input level	0.77 mV (-60 dB)	0.25 V (-10 dB)	17 mV (-33 dB)

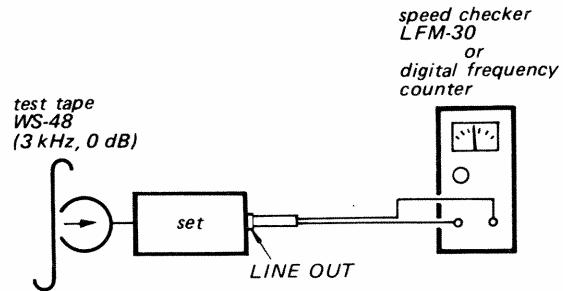

Standard Output Level

	LINE OUT	HEAD- PHONES	REC/PB (AEP, UK, E model)
load impedance	47 kΩ	8Ω	50 kΩ
output level	0.44 V (-5 dB)	31 mV (-28 dB)	0.44 V (-5 dB)

Tape Speed Adjustment

Procedure:

Mode: playback

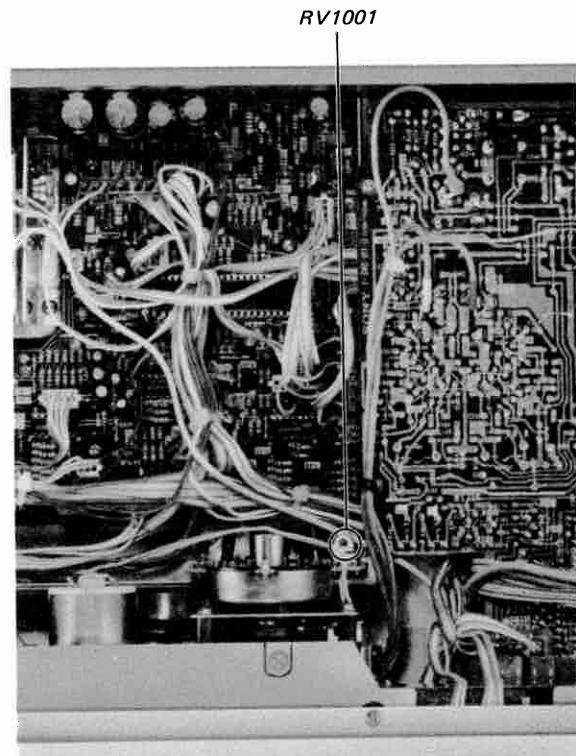

Specification:

Speed checker	Digital frequency counter
-0.7 - +0.7 %	2,980 - 3,020 Hz

Frequency difference between the beginning and the end of the tape should be within 0.7 % (20 Hz).

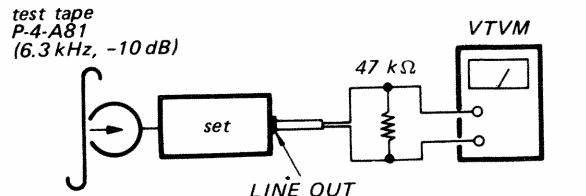

Adjustment Location:

— servo amp board —

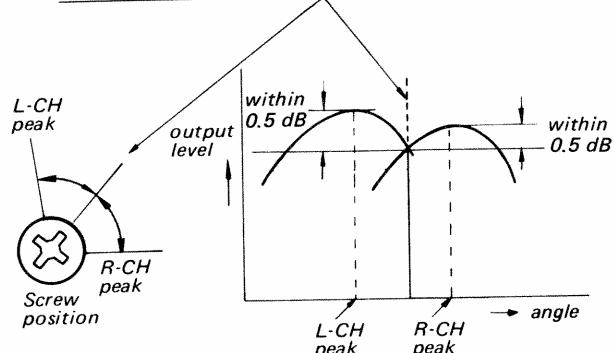

Record/playback Head Azimuth Adjustment**Procedure:**

- Mode: playback

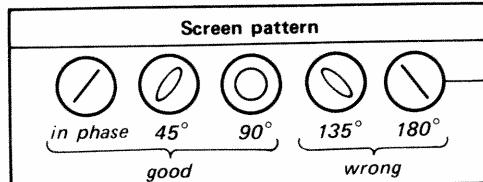

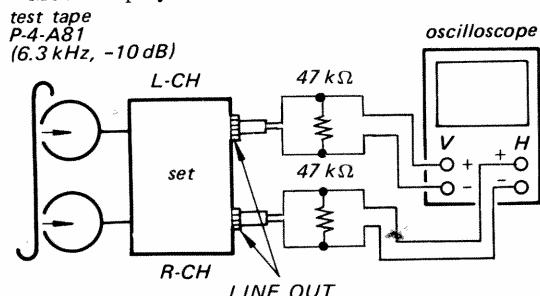

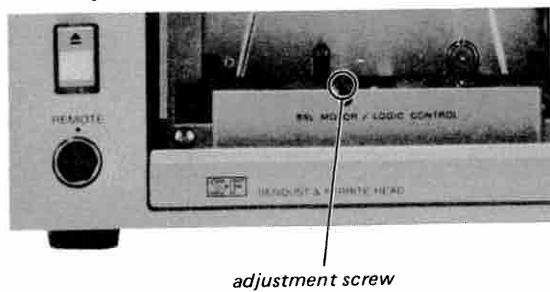

- Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw where both of output levels match together within 0.5 dB.

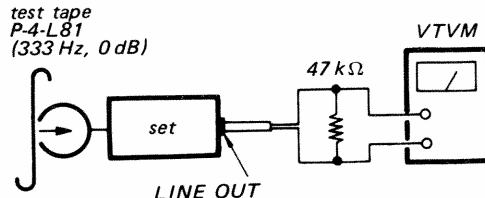

- Phase Check

Mode: playback

**Adjustment Location:****Playback Level Adjustment****Procedure:**

Mode: Playback

Adjust RV104 (L-CH) and RV204 (R-CH) to obtain the specified LINE OUT level.

Specification:

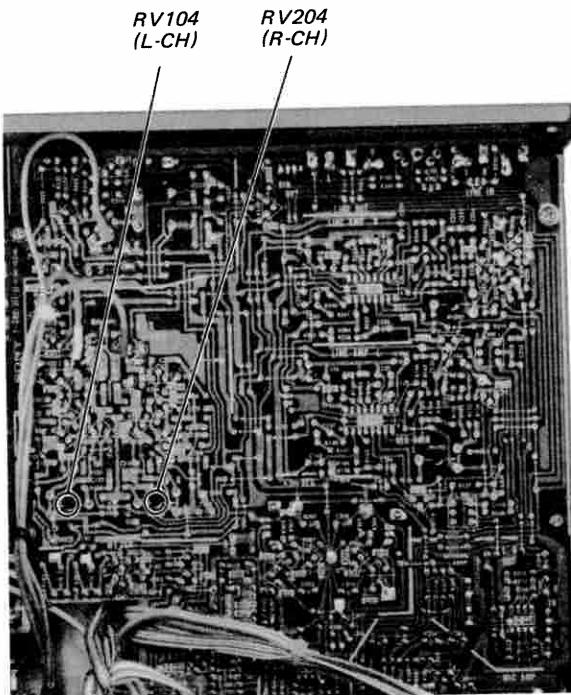

LINE OUT level: 0.52 – 0.59 V
(-3.5 to -2.5 dB)

Level difference between channels:
less than 0.5 dB

Check that the LINE OUT level does not change in playback mode while changing the mode from playback to stop several times.

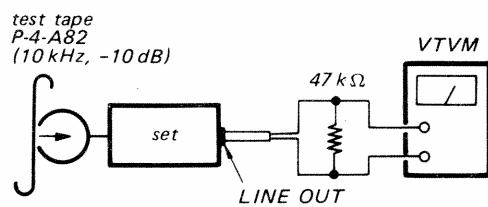

Adjustment Location:

— record/playback board —

Playback Equalizer Adjustment**Procedure:**

Mode: playback

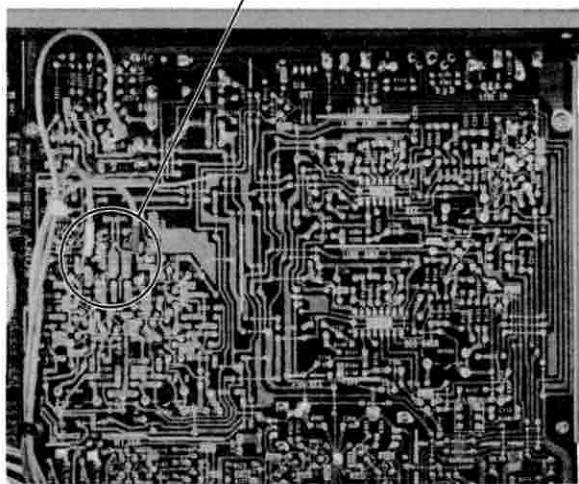

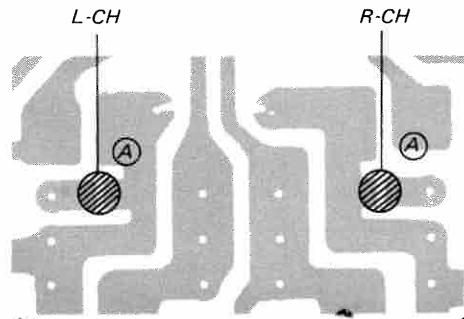

**Specification:**

BIAS switch	EQ switch	LINE OUT level
MED	TYPE I	0.12 – 0.27 V (-16 to -9 dB)
HIGH	TYPE II	0.077 – 0.17 V (-20 to -13 dB)

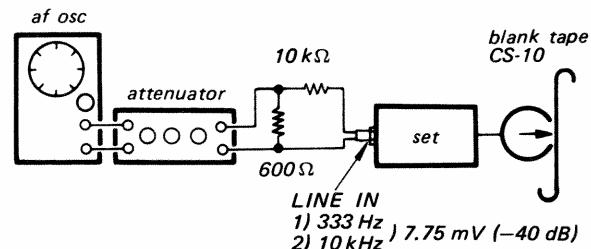

Adjustment Location:

— record/playback board —

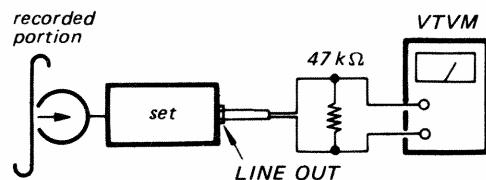

Bridge patterns	10 kHz level
(A)	up (approx. 0.5 dB)

**Record Bias Adjustment****Setting:**REC LEVEL control: standard record
(See page 17.)**Procedure:**

1. Mode: record

2. Mode: playback

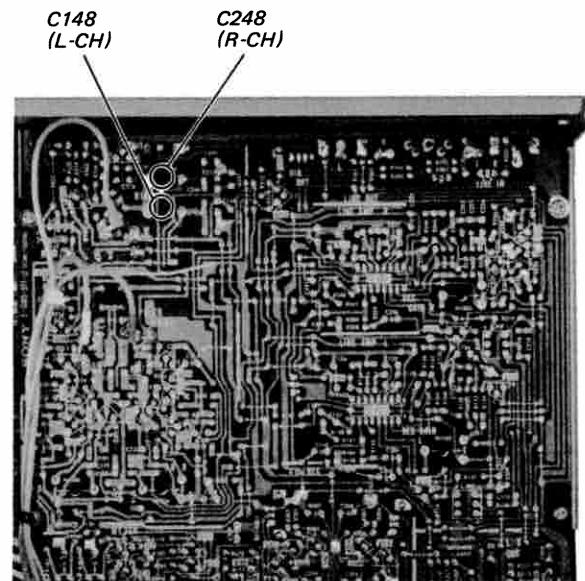

Confirm that the LINE OUT level of 10 kHz signal is 0 dB relative to that of 333 Hz.

If necessary, adjust C148 (L-CH) and C248 (R-CH).

Adjustment Location:

— record/playback board —

SECTION 4 DIAGRAMS

Record Level Adjustment	Level Meter Calibration						
Setting: REC LEVEL control: standard record (See page 17.)	Setting: REC LEVEL control: standard record (See page 17.)						
Procedure:	Procedure:						
1. Mode: record	<p>af osc</p>						
2. Mode: playback	<p>Just after the element at -2 dB (■ mark) turned off, adjust RV106 (L-CH) and RV206 (R-CH) so that the element at 0 VU (-4 dB) keeps turning on.</p> <p>Increase the LINE IN level to +2 dB ±1 dB. The right-most element at +8 dB should turn on.</p> <p>Decrease the LINE IN level to -46 dB ±3 dB. The second element from the left end should turn off. If not even with a LINE IN level of -49 dB, bridge the patterns as follows.</p>

A

- Note:**
- Items with no part number and/or no description are not stocked because they are seldom required for routine service.
 - All screws are Phillips (cross recess) type unless otherwise noted.
 - (-) = slotted head
 - (□ □ T) shows the number of coils in spring.
 - Circled letters (A) to (Z) are applicable to European models only.

SECTION 6

ELECTRICAL PARTS LIST

Note: Circled letters (A) to (Z) are applicable to European models only.
